WENDY WANG

San Jose, CA | wendywenzheng@gmail.com | linkedin.com/in/wendywangba | wendywangba.github.io

Authorized to Work in the U.S. — No Sponsorship Required, Now or in the Future | Open to Relocation & Remote

PROFESSIONAL SUMMARY

Data analyst with a foundation in statistics (B.S.) and business analytics (M.S.), experienced in delivering end-to-end analytical solutions, including a six-month practicum with the research team at X, the Moonshot Factory (Alphabet). Skilled in building automated data pipelines, executive dashboards, and predictive models across datasets ranging from a 48,000-record client database to a 27-year satellite time series. Proficient in SQL, Python, R, Tableau, Looker Studio, and BigQuery, with coursework in classification modeling, statistical inference, and NLP.

EDUCATION

Master of Science in Business Analytics | Santa Clara University *Graduated December 2025*

Bachelor of Science in Statistics, Minor in Data Science | Iowa State University *Graduated June 2024*

TECHNICAL SKILLS

Programming & Data: SQL, PostgreSQL, Python (Pandas, NumPy, xarray, scikit-learn, XGBoost, LightGBM, Matplotlib, Seaborn), R (dplyr, ggplot2, tidyverse), PySpark

Visualization & BI: Tableau, Looker Studio, Streamlit, Excel, Google Sheets

ML & Analytics: Classification (Logistic Regression, Random Forest, XGBoost, LightGBM), Clustering, PCA, Hypothesis Testing, Statistical Inference, Customer Segmentation, RAG, Sentiment Analysis

Tools & Platforms: BigQuery, Google Cloud Platform, AWS, Google Earth Engine, NetCDF / Copernicus Marine Toolbox, Git/GitHub, Microsoft Office Suite

PROFESSIONAL EXPERIENCE

Research Assistant – Data Analytics (Part-time) | Santa Clara University *Jul 2025 – Dec 2025 | Santa Clara, CA*

- Built end-to-end geospatial data workflows on Google Earth Engine to automate extraction, transformation, and analysis of large-scale satellite imagery datasets for environmental research
- Authored technical documentation enabling reproducibility; independently managed concurrent projects with weekly progress reports to the faculty PI

Data Analyst (Practicum) | X, the Moonshot Factory (Alphabet) *Jan 2025 – Jun 2025 | Mountain View, CA*

- Independently owned the water-clarity workstream on a 4-person blue-economy research team: built an automated Python (xarray, pandas) pipeline processing a 27-year satellite ocean-color record (NetCDF, 10,000+ daily grids) into a 9,147-observation analytical dataset, delivered through BigQuery to an interactive Looker Studio dashboard
- Collaborated with X engineers and researchers in recurring technical syncs; presented findings to senior public-sector stakeholders, where a senior environmental official confirmed the 2.3× water-clarity contrast between exposed and sheltered coastlines matched their operational knowledge
- Co-authored a technical whitepaper synthesizing the team's findings into strategic recommendations for public-sector stakeholders

PROJECT EXPERIENCE

Business Data Migration & Workflow Automation | Independent Project *Jan 2026 – Present | Remote*

- Migrated multi-year operations records from fragmented spreadsheets into a normalized, multi-table relational system on Lark Base (no-code relational database); designed linked-table schema with lookup and rollup relationships to create a single source of truth
- Automated delivery-note generation directly from order records, replacing manual document preparation and eliminating the transcription and reconciliation errors of the prior unauditable spreadsheet process

Lead Data Analyst | Casa Grata (Colombia) — Miller Center Consulting Program, SCU *May 2025*

- Led analytics for a week-long consulting engagement with a Colombia-based energy nonprofit: reverse-engineered an undocumented 24-table PostgreSQL database (48,000+ records) by generating a data dictionary, programmatically inferring table relationships, and building the Tableau relationship model behind the team's dashboards
- Designed field-agent collection KPIs from payment-reconciliation data; showed top collectors by volume were not top performers by success rate, and delivered success-rate-based coaching recommendations to client leadership; placed 2nd university-wide

Injury Severity Classification – Car Crash Analysis | SCU ML Course Project *Winter 2025*

- Compared 5 classification models on ~19.5K crash records to predict injury severity; selected LightGBM (F1 = 0.744, AUC = 0.949) with class imbalance handled via balanced class weights
- Applied SHAP analysis to interpret feature contributions; identified vehicle characteristics, crash location, and speed limit as top predictors, informing insurance risk segmentation

RAG-Based Course Advisory Chatbot | SCU NLP Project *Fall 2025*

- Co-built a RAG advising chatbot on a 3-person team: owned product design and the web chat front end over a FAISS-based retrieval pipeline, and defined the strictly grounded answer policy — the bot declines out-of-scope questions instead of hallucinating
- Designed the live demo around trustworthiness: surfacing prerequisites buried in spreadsheet footnotes, refusing unanswerable questions
